

The Breath Therapy

Website Owner's Guide

Everything you need to manage your website independently

Built by Studio Velox · studiovelox.com · August 2026

How Your Website Works

Your website is made up of four services that all talk to each other. You don't need to understand the technical details -- just know what each one does and when you'd need to log in.

VentraIP -- ventraip.com.au

This is where thebreaththerapy.com.au is registered. Think of it like the deed to your house -- it proves you own the domain name. You pay ~\$27/year to renew it. You almost never need to log in here.

 If this domain expires, your website and email will go offline. Set a reminder 30 days before the renewal date each year.

Cloudflare -- dash.cloudflare.com

Cloudflare sits between the internet and your website. It makes your site fast, secure (the padlock), and handles your professional email address (taylor@thebreaththerapy.com.au). You rarely need to log in here.

GitHub -- github.com

This is where your website's code lives. Every time you make a change here, your live website updates automatically within about 60 seconds. This is where you'll spend most of your time.

Claude AI -- claude.ai

Claude is an AI assistant you can use to help you write or edit website code. You describe what you want changed in plain English, Claude writes the code, and you paste it into GitHub. No coding knowledge needed.

Your Accounts

Here are the accounts that run your website. Keep these login details somewhere safe -- a password manager like 1Password is ideal.

VentraIP

URL: ventraip.com.au

Your domain registrar. Log in once a year to renew the domain. That's it.

Cloudflare

URL: dash.cloudflare.com

Manages your hosting and email routing. You'll rarely need to come here unless something stops working with your email.

GitHub

URL: github.com

Where your website files live. You'll use this regularly to make updates. See Section 3 for setup instructions.

Claude AI

URL: claude.ai

Your AI assistant for making website changes. A free account works for basic use. If you use it a lot, a Pro plan (~\$25 AUD/month) gives you much more capacity.

Luma

URL: lu.ma

Where you create and manage your events and take bookings. Your website just links to your Luma event pages.

Setting Up GitHub

GitHub stores your website code. You can edit your website directly in your browser -- no software to install.

Creating Your GitHub Account

1. Go to github.com and click 'Sign up'
2. Enter your email address, create a password, and choose a username
3. Verify your email address when GitHub sends you a confirmation
4. Once logged in, go to github.com/Pacman1979/Taylor -- this is where your website lives

💡 Tip: Bookmark github.com/Pacman1979/Taylor/blob/main/index.html -- this takes you directly to your website file.

Getting Access

Your website is currently under Phil's GitHub account. To get your own access:

1. Send Phil your GitHub username once you've created your account
2. Phil will add you as a collaborator -- you'll get an email invitation
3. Accept the invitation and you'll have full edit access

Editing Your Website (No Code Needed)

1. Go to github.com/Pacman1979/Taylor/blob/main/index.html
2. Click the pencil icon  in the top right of the file
3. Use Ctrl+F (or Cmd+F on Mac) to search for the text you want to change
4. Make your changes directly in the editor
5. Scroll down and click 'Commit changes'
6. Type a short description (e.g. 'Update July events') and click 'Commit changes' again
7. Your live website updates automatically within 60 seconds 

💡 Tip: Always write a clear commit message like 'Add August breathwork event' or 'Update Instagram followers to 2,100'. It helps you track what you changed and when.

Making Website Changes

Updating the Announcement Bar

The black bar at the very top of your website.

1. Open your website file in GitHub and click the pencil to edit
2. Press Ctrl+F and search for 'NOW TAKING BOOKINGS'
3. Change the months - for example, change 'August & September' to 'October & November'
4. Commit the change

Updating Upcoming Events

1. Search in the file for 'ADD NEW EVENTS HERE'
2. Copy an existing event block and change the date, title, location, time and price
3. Update the Luma link to point to the correct booking page
4. Delete any past events that are no longer relevant

 Tip: If this feels complicated, just ask Claude AI to do it for you. Paste in the event details and Claude will write the exact code to add.

Adding a New Google Review

1. Search for 'Love Notes' in the file to find the reviews section
2. Copy an existing review card and replace the quote, name and tag
3. Paste it before the dark Google review card (which should always be last)

Updating Instagram Followers

1. Search for the current follower number (e.g. '1,962')
2. Change it to the new number
3. Commit the change

Changing a Photo

1. Go to github.com/Pacman1979/Taylor and click the images folder
2. Click 'Add file' then 'Upload files'
3. Upload your new photo -- use a simple filename with no spaces (e.g. Taylor-new.jpg)
4. In the website file, search for the old photo filename and replace it with the new one

 Keep photos under 2MB where possible. Large files slow down your site.

Using Claude AI

Claude is an AI that can write website code changes for you. Just describe what you want in plain English.

Getting Started

1. Go to claude.ai and create a free account
2. Start a new conversation
3. Copy and paste the section of your website you want to change, then describe what you want done
4. Claude will write the updated code for you
5. Copy Claude's output and paste it into the right place in your GitHub file

Example Prompts

 Example: I manage a website for a breathwork business called The Breath Therapy. I need to add a new event: [event name], [date], [location], [time], [price]. The Luma booking link is [link]. Can you write the HTML code for this event?

 Example: I have a new 5-star Google review to add to my Love Notes section. It's from [Name] and says: '[review text]'. Can you write the HTML card code for this?

 Example: I need to update the announcement bar to say 'Now taking bookings for October & November events on the Gold Coast & Melbourne'. What text do I search for and what do I replace it with?

 Example: Something on my website looks broken -- [describe what you see]. Here is the relevant HTML code: [paste code]. Can you help me fix it?

Tips for Best Results

- Be specific -- the more detail you give, the better the result
- Always tell Claude it's an HTML website for The Breath Therapy
- If the result isn't right, describe it differently and try again
- You can paste screenshots into Claude to show it what something looks like

Managing Luma Events

Luma is where people book and pay for your sessions. Your website links to Luma -- it doesn't handle payments directly.

Getting Your Luma Event Link

1. Log into lu.ma and create your new event
2. Once published, copy the event URL -- it'll look like lu.ma/abc123
3. Update the relevant 'Book Now' link on your website to use this new URL

Current Luma Links

- Gold Coast Breathwork events -- lu.ma/marchapril
- Pilates & Breath by the Beach -- lu.ma/m6gx5y2h
- Melbourne Breathwork -- lu.ma/9ju5ms11

 **Tip:** When you create a new round of events, update all the relevant links on your website at once.

Your Professional Email

Your email address taylor@thebreaththerapy.com.au forwards all emails into your existing Gmail account. You don't need to check a separate inbox -- everything arrives in Gmail as usual.

If Emails Stop Arriving

1. Log into dash.cloudflare.com
2. Click on thebreaththerapy.com.au
3. Click Email → Email Routing
4. Check the routing rule is enabled and pointing to your Gmail

Sending from Your Professional Address

1. In Gmail, click the cog icon  → See all settings
2. Click the Accounts and Import tab
3. Under 'Send mail as' click 'Add another email address'
4. Enter Taylor Valentino and taylor@thebreaththerapy.com.au
5. Follow the verification steps

Domain Renewal

Your domain thebreaththerapy.com.au needs to be renewed each year through VentraIP. The cost is approximately \$27/year.

 This is the most important thing not to forget. If your domain expires, your website, professional email and everything connected to thebreaththerapy.com.au will go offline.

How to Renew

1. Log into ventraip.com.au
2. Go to My Services → Domain Names
3. Click Renew next to thebreaththerapy.com.au
4. Pay the renewal fee

 Tip: Set up auto-renewal in VentraIP with a credit card on file so it renews automatically every year.

If Something Breaks

Don't panic. Websites can be fixed. Here's how to diagnose what's wrong.

The Whole Site is Down

- Check cloudflarestatus.com -- there may be a Cloudflare outage
- Check your domain hasn't expired in VentralIP
- Wait 10 minutes and try again from a different device or incognito window

A Change I Made Broke Something

- Go to github.com/Pacman1979/Taylor/commits/main
- Find your last commit and click the three dots ... → 'Revert'
- This undoes your last change and restores the previous version

Something Looks Wrong but the Site is Up

- Try a hard refresh: Ctrl+Shift+R (Windows) or Cmd+Shift+R (Mac)
- Try opening the site in an incognito/private window
- Describe the issue to Claude AI with a screenshot -- it can usually diagnose and fix it

My Email Isn't Working

- Check Cloudflare Email Routing is still enabled (see Section 7)
- Check your Gmail spam folder
- Make sure your Gmail verification for the destination address hasn't expired

Getting Help

Your website was built by Phil Campbell from Studio Velox. Phil is available for ongoing support when you need it.

Studio Velox -- Ongoing Support

Hourly: \$50/hr -- Ad-hoc help for one-off changes, fixes or bigger updates.

Monthly: \$147/month -- Ongoing support including regular updates, event changes and general maintenance.

Website: studiovelox.com

When to Use Claude AI vs Call Phil

Use Claude AI for: text changes, adding events, new reviews, updating stats, swapping photos -- anything in this guide.

Call Phil for: site going completely offline, DNS or Cloudflare issues, adding a new section, setting up payments or a shop, anything that feels too technical.

-- End of Guide --
